Invitation to take part

You are being invited to take part in a study that involves clinical research. Taking part in this study is voluntary. Before you decide whether you would like to take part in the study, it is important for you to understand why the study is being carried out and what it will involve. It is important that you take time to read the following information carefully and discuss it with relatives and your doctor if you wish. Don't feel under pressure to make a quick decision. Once you have read the information and are happy that all your questions have been answered and you understand the risks and benefits you will need to decide if you wish to take part in the study and make the decision that is right for you. This process is known as 'Informed Consent'.

1. Why am I being asked to participate?

You have been invited to join the study because you have a condition called coronary heart disease and you are scheduled to undergo a Percutaneous Coronary Intervention - PCI (which has been explained to you as per routine practice by your physician).

Your condition causes a critical narrowing of your coronary arteries (arteries which supply blood to the heart muscle). If left untreated, the narrowing can permanently damage your heart. Yours has a particular location, close to a segment where your artery splits in two: a main vessel and a side vessel. This is the reason why it is called a coronary bifurcation lesion.

While the technique is used daily in the routine practice, there are still place for improvements in the treatment of bifurcation lesions because both vessels need be treated at the same time. To do so, two approaches exist to treat the side vessel: to open it with a balloon or not.

Pros and cons of these techniques are debated by experts. This is why there are still ongoing studies to try to improve further the outcome of patients with coronary heart disease.

Around 20 hospitals in up to 6 European countries are taking part in the study and we will recruit 596 patients.

2. What is the purpose of the study?

The purpose of the study is to determine the best way of treating a bifurcation lesion. During the angioplasty, a stent will be implanted in the main vessel. Then, two methods of treatment will be compared:

- Use an inflatable balloon to open the side vessel,
- Or leave the side vessel with no intervention at all.

Both methods are successfully commonly used. The aim of the study is to find which method is best.

3. Who is organising and funding this study?

This study is sponsored by: CERIC, CEnter for European Research Initiatives in Cardiovascular medicine, 3 rue des Granges, 1204 Genève, Switzerland

The representative of this sponsor in the European Union is:

CERC, Cardiovascular European Research Center, 7 rue du Théâtre, 91300 Massy, France

The data of this study will be processed/images will be reviewed by:

CERC, Cardiovascular European Research Center, 7 rue du Théâtre, 91300 Massy, France

4. Why have I been chosen?

You are being asked to participate in this study because your doctor thinks that your physical and medical condition makes you a good candidate to benefit from one of the two study therapeutic strategy to treat your coronary lesion.

Your health condition and results of exams will be reviewed by your doctor to determine whether you are eligible to take part in the study.

5. Do I have to take part?

Your decision to participate in this study is voluntary. If you decide to take part, you will be asked to sign the consent form attached to this document and you will be given a copy to keep.

It is important to note that you are free to withdraw at any time, without giving a reason. A decision to withdraw at any time, or a decision not to take part, will not affect your medical care in any way, however we encourage all patients taking part in the study to complete the follow-up until 1 year (12 months) after the implantation so that your doctor can closely monitor your safety.

The investigator or the ethics committee/regulatory authority may discontinue participation or withdraw approval of this clinical investigation, respectively, with suitable written notice to the sponsor.

The sponsor can also suspend or terminate the clinical investigation at any stage but intends to exercise this right only for valid scientific or administrative reasons and reasons related to protection of subjects.

You are automatically withdrawn from investigation in following situations:

1) You withdraw informed consent
2) If your percutaneous coronary intervention was abandoned prior to attempted implant

6. How long is this study and how long will I participate?

The study is expected to last 3 years and You will be part of the study for 1 year, commencing from the time of your percutaneous coronary intervention.

7. What will happen to me if I take part?

The percutaneous coronary intervention and the clinical follow-up are the same as for any other percutaneous coronary intervention. The difference of participating in the study is that some medical data will be collected and analysed for the purpose of the KISS study.

If you are included in the clinical study, you will receive one or more a Medtronic Resolute Onyx drug eluting stent. The therapeutic strategy used to treat or not the side branch will be allocated to you by chance and you will be treated either according to the first or second strategy. In the case you are not eligible for inclusion in this trial, you will be treated with routine practice of the hospital.

You will then be contacted by phone or asked to come back to the hospital for a follow-up visit with your physician at 1 month and 1 year after the procedure, in order to collect information about your health condition, in particular your medications and potential problems you may have experienced since you left the hospital.

Your physician in charge of the study will provide you with any new information likely to affect your decision to take part in the study and will give you full access to your medical records.

He/she will also inform you of the study results upon request.

As a participant in the study, you have certain responsibilities, in particular, you have the responsibility to be truthful regarding your health and medication history.

You are expected to accept to be contacted by phone or come for visit during 1 year. The medical follow-ups are a component of the study. They are important for data collection and for monitoring your health status. You should not take part in this study if you will not be available for the check-ups or if you wish to participate in another clinical study in the course of this study.

You also have the responsibility to report any injuries, hospitalizations, emergency room visits, or other medical visits, symptoms or complaints to the study doctor or study nurse when they contact you for follow up visit.

8. What are the possible benefits of taking part?

It cannot be guaranteed that you will benefit from participation in this clinical study.

As part of the study, you will receive a higher degree of telephone and clinical follow-up than you would outside of the study environment and have a dedicated clinical study team following your progress. It is known that patients included in trials have a better outcome than the others. Information gained from the performance of this study will be of benefit to other people with coronary heart disease in the future.

9. What are the risks and discomforts if I take part in this study?

If you decide to participate in this study, you should know there may be no additional risks than those of a regular percutaneous coronary procedure, which vary depending on your overall health and your individual heart condition. There may also be risks and side effects other than those listed below that cannot be predicted. Your doctor will be able to discuss your individual risks with you before your treatment.

As with any treatment of a coronary bifurcation lesion by means of a percutaneous coronary intervention, the major complications are:

- Death: less than 0.5%
- Stroke: 0.5%
- Heart Attack: 2-5%
- Bleeding (major and minor): 2-5%
- The risk of a blockage of the stent(s), called stent thrombosis and the potential risk of heart attack or death due to this blockage is less than 2% within 1 year after implantation.

The doctors performing your percutaneous coronary intervention use X-rays to direct the stent to the correct position. No additional radiation will be used in the study; your exposure to the radiation will be part of the normal care and should carry no extra risks. High doses of x-ray have the potential to cause skin damage, however, we do not anticipate this percutaneous coronary intervention will exceed the accepted threshold.

10. Will my taking part in this study be kept confidential?

Your clinical records are strictly confidential. Any records identifying you will be kept confidential to the extent allowed by the law.

The study doctors, or personnel they work with, will collect your personal information and will record the data in a secured online accessible database using unique patient ID number, without specifying your name.

By signing the informed consent attached to this information sheet you agree that your general practitioner will be informed by the study doctor of your participation in this clinical study.

If you consent to take part in this clinical study, any of your medical records may be inspected by research and healthcare professionals, the Study Sponsor, its representatives, the Ethics committee who approved the clinical investigation and National or International regulatory authorities. Your name will not be disclosed outside the hospital/clinic.

Only the Sponsor's qualified and authorised personnel including consultants designated by the Sponsor to review your medical records and data recorded in the online data base, shall consult

your medical records to ensure the accuracy of the data collected by the study doctor and research nurse.

The database without personally-identifiable data will be accessible by the sponsor as well as by the Cardiovascular European Research Center (CERC) located in Massy, France. Specialists will review your angiographic images in a centralised manner. Access to the database, and other study documents will be restricted to the parties mentioned above.

Data will be used in a clinical report or in publications or presentations at scientific conferences and for future market access of this medical device / and for new therapeutic strategy, However, your name or any information that may identify you shall not appear in any study report, publication or scientific presentation. You will be able to receive copies of the publications from your study doctor upon request.

Information about this clinical study project has been notified in a publicly accessible data base www.clinicaltrials.gov (NCT04285372). The progress of the project shall also be logged in that data base without disclosing any personal information of subjects participating in the study.

You have the right to access the personal information collected about you and have the right to ask to have the information corrected in case the information is not accurate.

11. Data Protection

CERIC is the sponsor for this study. The sponsor will be using information from you and your medical records in order to undertake this study and will act as the data controller for this study. This means that CERIC is responsible for looking after your information and using it properly.

According to data protection legislation, we are required to inform you that the legal basis we are applying is that processing is necessary for the purposes of the legitimate interests pursued by the data controller, i.e. the Study Sponsor. Your personal data will only be processed if you give written informed consent to the processing.

CERIC will keep data about you for 15 years after the study has finished. This data is pseudo-anonymised, i.e. all identifiers such as your name, initials, date of birth, contact details etc. have been removed and it is not possible to link the data to you as an individual person.

The [Name of hospital] will keep your name, hospital identification number and contact details confidential and will not pass this information to the study sponsor. The [Name of hospital] will use this information as needed, to contact you about the clinical study, and make sure that relevant information about the study is recorded for your care, and to oversee the quality of the study. They will keep identifiable information about you from this study for 15 years after the study has finished.

Data protection regulation provides you with control over your personal data and how it is used. When you agree to your information being used in clinical study, however, some of those rights may be limited in order for the clinical study to be reliable and accurate.

- You do have a right to withdraw consent.
- You do have a right to lodge a complaint with the Data Protection Commissioner.
- You do have a right to request access to your data and a copy of it, unless your request would make it impossible or make it very difficult to conduct the clinical study.

- You do have a right to restrict or object to processing, unless your request would make it impossible or make it very difficult to conduct the clinical study. e.g. you do not want your data shared but also do not mind having it collected and stored.
- You do have a right to have any inaccurate information about you corrected or deleted, unless your request would make it impossible or make it very difficult to conduct the clinical study.
- You do have a right to have your personal data deleted.
- You do have a right to data portability, meaning you have a right to move your data from one controller to another in a readable format.

Your rights to access, change or move your information are limited, as we need to manage your information in specific ways in order for the clinical study to be reliable and accurate. If you withdraw from the study, we will keep the information about you that we have already obtained. To safeguard your rights, we will use the minimum personally-identifiable information possible.

Further information about your rights with respect to your personal data under the General Data Protection Regulation (GDPR), which came into effect on 25 May 2018, is available at [website hospital regarding rights under GDPR]

If you wish to find out more about how we use your information, to exercise any of the rights under GDPR or to lodge a complaint please contact [contact details hospital's Data Protection Commissioner].

12. What if new information becomes available?

Sometimes, during the course of a study, new information becomes available about the treatment that is being studied. If this happens, your doctor will tell you about it and discuss with you whether you want to continue the study. If you decide to withdraw, your doctor will make the arrangements for your care to continue. If you decide to continue in the study you may be asked to sign an updated consent form.

Also, on receiving new information your doctor might consider it to be in your best interest to withdraw you from the study. He/she will explain the reasons and arrange for your care to continue.

In the unlikely event that new information may lead to the sponsor to stop this clinical study, you will still be followed up and receive proper medical care of your doctor.

13. What if something goes wrong?

It is not expected that you will suffer any health problems due to your participation in this study. However, as is the case with any treatment, unexpected risks can occur. Your study doctor will take every step to make sure that any risk of injury is as low as possible in this clinical study. If you are injured whilst taking part in this study, you will receive medical treatment, including emergency treatment and follow-up care.

In compliance with current legal requirements, the Study Sponsor has taken out an insurance policy [policy number, Insurer contact details] that covers all injuries that occur as a direct result from your participation in this study.

14. Will I be compensated for participating in this clinical study?

You will not be paid for this study.

Your participation in this clinical study will not induce any additional costs to you personally. The sponsor will cover any costs that are outside the normal care you would otherwise be entitled to.

15. Who has reviewed the study?

All clinical study in this country is looked at by an independent group of people, called a Research Ethics Committee, to protect your interests. This study has been reviewed and given favourable opinion by [REC name] on [date].

16. Contact details for further information:

If you have additional questions about the clinical investigation you may address them to your study doctor or/and to the Principal Investigator of the study:

Principal Investigator
Dr Bernard Chevalier Hôpital Privé Jacques Cartier 6, Avenue du Noyer Lambert, 91300 Massy, France +33(0)1.60.13.46.02

If you have questions about your rights regarding your personal data as a participant, you can call the sponsor's Data Protection Officer: dpo@ceric-europe.com

If you have any complaints about this clinical study, you may contact the Principal Investigator or the Research Ethics Committee.

<ETHICS COMMITTEE NAME, ADDRESS, AND PHONE NUMBER>

If you experience an injury as a result of this study, please contact the study doctor.

It is important after starting your participation to ensure that data concerning your health are accurately and timely collected. Should your study doctor not be able to reach you at any point, we kindly ask you to inform a next of kin about your participation in this clinical investigation and let him/her know that it is fine for the study doctor to contact them should you not be reachable. You will provide the name and contact details of that person to the study doctor.

Thank you for taking part in this study!

You will be given a copy of this information sheet and a copy of the signed consent form to keep.

Patient CONSENT FORM

KISS

Study Sponsor **CERIC, 3 rue des Granges, 1204 Genève, Switzerland**

Centre Name: …….

Investigator Name: Dr Bernard Chevalier, Hôpital Privé Jacques Cartier
6, Avenue du Noyer Lambert, 91300 Massy, France

Patient Identification number for this clinical study: ……..

• I confirm that I have read and understand the information sheet version 1.0 dated 31 March 2020 for the above study. The information has been fully explained to me and I have had sufficient time to consider my participation and the opportunity to ask questions which have been answered to my satisfaction.
• I agree to take part in this study, to follow the investigator's instructions and to comply with the requirements described in the information sheet.
• I understand that my participation in this study is voluntary and that I am free to withdraw at any time without giving any reason, without my medical care or legal rights being affected.
• I am aware of the potential risks, benefits and alternatives of this clinical study.
• I understand that sections of any of my medical notes may be looked at by responsible individuals from the study sponsor**,** its representative in the European Union or from regulatory authorities and ethics committees where it is relevant to my taking part in clinical study. I give permission for these individuals to have access to my records.
• I have been assured that information about me will be kept private and confidential.

• I agree that my general practitioner shall be informed about my participation in this clinical study project
• I give informed consent to have my data processed as part of this clinical study.
